**Total Feeds®**

Developed by a Canadian biotech company committed to improving health in animals, this once-a-day natural supplement provides relief from joint tenderness. Horses regain their mobility and confidence, returning to their original activities of racing, jumping, everyday riding or loafing more comfortably in their surroundings.

Equine15 NATURAL seems to modulate the abnormal metabolic responses associated with disease states such as those exhibited by chronically inflamed cells, which include cells associated with forms of arthritis. This is the only alternative on the market, and is more effective than glucosamine and/or chondroitin.

In addition, research has shown that **Equine15 NATURAL** has controlled viruses from five different families. Several viruses cause inflammation and respiratory problems in horses and horses with respiratory infections have received relief from treatment with this product. This is the only antiviral product available over-the-counter for horses on the market today.

Safe and Effective

Equine15 NATURAL contains two natural ingredients, elemental sulfur and lignosulfonates, both of which are found in many food and feed products, their inclusion therein, approved by both the Canadian and US health authorities. A proprietary manufacturing process results in the therapeutic properties of this new product.

Safe For Use in Competition Horses

Health Canada has accepted **Equine15 NATURAL** in its Low Risk Veterinary Products Program and provided the Notification Number: NN.U6F1. In addition, the Canadian Food Inspection Agency approved this product as a feed supplement for horses. These official notifications, together with horses on our product that have won races and passed the mandatory equine drug testing, indicate that the **Equine15 NATURAL** product is safe to use when horses are racing or in other kinds of competitions.

Easy To Use and Fast Acting

Equine15 NATURAL is easy to administer, simply add one teaspoon (5 grams) of powder to the horse's feed each day. A fast acting product, often within a week your equine partner will show signs of being free from pain, becoming more mobile while those that have had coughs don't cough any more.

Features:

- Natural
- Antiviral
- Safe
- Regulatory Approval
- Improves Mobility
- Easy to Use
- Cost Effective
- Unique

Benefits:

- Controls Viruses
- Widely tested on several species
- Reduces pain
- One capsule per day with food
- Cost effective health improvement
- One of the few OTC antivirals available
